

Help with Health Research

Climate change & Health Care

b.gill2@lancaster.ac.uk
or
h.garrett@lancaster.ac.uk

We are looking for people to help us with some
exciting research about
climate change and health care

Climate & Healthcare

Climate

The NHS has a **big carbon footprint!**
This adds to climate change.

The NHS is the first health system in the world to commit
by law to stop adding to climate change by 2040.

Short-term intensive treatment in hospital is the
biggest medical care contributor to climate change.

Virtual Health Care

A service called **Virtual Wards** cares for people, at
home using digital technologies.

It's used for people with acute conditions, such as
breathing problems, heart failure, or frailty.

We want to know if it's better for the environment
than care in hospital.

**Join us as a member of our Public and Community
advisory group!**

We welcome people from all backgrounds

We will offer **training, support and reimbursement for
time and expenses** in line with national guidelines from
the National Institute for Health and Social Care

For more information or an informal chat please contact:

Bethany Gill b.gill2@lancaster.ac.uk

or

Hilary Garrett h.garrett@lancaster.ac.uk

About You

Are you someone who:

- Can you use zoom/Microsoft teams or telephone conferencing?
- Are you interested in climate issues and lowering carbon emissions?
- Are you interested in exploring healthcare issues?
- Have you or your family used the Virtual Wards service?

**If some or all
of these apply to you
please get in touch!**
